

APPLICATION LIFECYCLE

Your IT department is responsible for an entire array of applications and systems that support your organization. You are confronted with their complexity and you experience problems in keeping track of all modifications. ViQiT helps you in mastering that complexity and provides you with an effective and efficient process.

Application Lifecycle?

You experience the main challenges with your IT processes at the so-called “switching points”. These refer to those moments in the process when IT activities such as design, building and management, connect with the other parts of your organization. This is exactly our specialization at ViQiT: we take care of the transfers between IT and your business departments within your organization. You can be sure that you have both the added business value of the solution as well as an efficient IT-landscape. Figure 1 shows gives you an example of where we support you in creating and managing IT-solutions that suit your organization.

Requirements Engineering and Testing

During the Requirements Engineering process we help you in translating your business – and process demands into requirements for your IT solutions. During the design and development phase of the IT-solution we safeguard those requirements to ensure that they are all accounted for. Combined with the technical and business risks the requirements are the foundation for the testing process. ViQiT specializes in testing and our colleagues will be glad to assist you with their expertise to verify and validate the developed solutions.

“ViQiT helped us in qualifying for certain systems in the energy market. Due to their vast and strong professional knowledge, ViQiT was able to facilitate this process for the full 100% and finalize it without any controversy. A rare experience of true alleviation.”

Daan van Dulst
Director Operations,
Nederlandse Energie
Maatschappij (NLE)

Application Lifecycle

Acceptance management and acceptance

Acceptance management aims at validating the IT-solution. Here you establish whether the intended objective of the delivered solution can actually be achieved. Acceptance covers all activities required to ensure that the IT-solution contributes to the success of the company. Of course this also covers the assurance that the deployment of the solution will not negatively affect the stability of the IT-systems and the organization. For managing and supporting the deployment activities you can also rely on the capabilities of our ViQiT colleagues.

Change and phasing out

Planning and organizing the required changes and managing the (partial) phasing out of applications is a complicated process. The decision making has many different angles. At ViQiT we have the experience in making decisions like these. We look forward to support you in reaching a well-considered decision.

Portfolio management

Our Portfolio management offering focuses on planning the IT demand and verifying whether your IT organization can comply with this. In addition we also verify that the IT demand of the various organizational units is compliant with the established architecture of the IT landscape, the goals of the organization and the known risks. The knowledge and experience of ViQiT consultants in the areas of IT Governance, commissioning, testing and acceptance management provides them with an excellent starting point for shaping your portfolio management in a distinctive manner.

We can imagine that you would like to know more about the ViQiT services regarding the Application Lifecycle. Do not hesitate to contact us, we are happy to talk with you!

The services ViQiT provides:

Consultancy

We advise about the various elements of the Application Lifecycle. E.g. the organization of your testing process, a quick scan for requirements engineering, or advice regarding the portfolio process.

Staffing

ViQiT performs activities regarding Application Lifecycle based on time and material calculation. We take on the roles of tester, test manager, business analyst or application manager in agile as well as other projects.

Sourcing

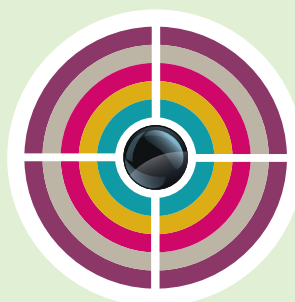

You outsource your Application Lifecycle activities to ViQiT on a fixed price basis. This could include e.g. the complete outsourcing of your testing trajectory. We execute the agreed activities to your specifications.

Training and coaching

ViQiT is an EXIN certified company for TMap training. We also provide the IREB training for requirements engineering. Of course we are also able to create a tailor made, in company training and workshop.

What we do in IT:

-  Client
-  Project definition
-  Application Lifecycle
-  Governance
-  Improvement management
-  Quality management
